

Risk Management

With regard to the risks surrounding the company environment, including natural disasters, we are working at a company level to reduce and prevent any impact in the event that they manifest themselves.

With the assumption that a large-scale earthquake will occur (something which is expected to happen in the near future), we place substantial importance on various activities for the purpose of "the safety of our employees' lives and bodies," "support for the recovery of our local community" and "prompt production recovery."

► Initiatives for the business continuity plan

At the company-level BCP promotion committee, we promote work to push forward with activities to protect the lives and bodies of our employees in times of emergency and to minimize the damage caused by large-scale disasters in a planned manner. Furthermore, we extract issues through production recovery drills and take action and make preparations in advance, in order to work toward developing human resources who will have adaptability with regard to disasters and to raising the level of the business continuity plan (BCP) as a whole.

Production recovery drills

► Conducting joint disaster countermeasures drills with the local community

Giving first priority to saving lives, our self-defense fire brigade cooperates with local fire departments, volunteer firefighters, hospitals and so on in order to conduct disaster countermeasure drills and individual

drills in anticipation of a large-scale disaster, and constantly strives to increase employees' awareness regarding disaster prevention.

Joint disaster countermeasure drills with the local community (Transportation drills)

Joint disaster countermeasures drills with the local community (Supervision drills)

Emergency destruction tool drills supervised by the fire department

Meal preparation drills in cooperation with dining hall operators

► Establishment of disaster prevention audit committee

On the basis of the results of self-checks, we implement disaster prevention audits through our officers and members of specialized committees. In addition, we conduct activities (practical drills, brainstorming sessions, mutual audits, study sessions,

etc.) by setting a focus theme for each fiscal year. We also perform emergency special inspections in accordance with the occurrence of accidents in other companies.
