

Risk Management

With regard to the risks surrounding the company including natural disasters, we are working at a company level to reduce and prevent any impact in the event that they manifest themselves.

With the assumption that a large-scale earthquake will occur (something which is expected to happen in the near future), we place substantial importance on various activities for the purpose of "the safety of our employees' lives," "support for the recovery of our local community" and "prompt production recovery."

Initiatives for the business continuity plan

At the company-level BCP promotion committee, we promote work to push forward with activities to protect the lives of our employees in times of emergency and to minimize the damage caused by large-scale disasters in a planned manner. Furthermore, we extract issues through production recovery drills and take action and make preparations in advance, in order to work toward developing human resources who will have adaptability with regard to disasters and to raising the level of the business continuity plan (BCP) as a whole.

Production recovery drills

Emergency headquarters

Conducting preventive activities against risks (including natural disasters) and initial action drills

We are striving to build a system by which employees can take initial action quickly in the event of incidents and to raise employees' awareness regarding disaster prevention, by conducting a variety of disaster countermeasure drills throughout the year, including company-wide disaster prevention months in March and September.

Fire extinguisher drills

Fire hydrant drills

AED drills

Stretcher drills

Slow-descent machine

Disaster prevention headquarters

Risk management

We implement periodic disaster prevention audits through specialized committees for each process which consist of officers and relevant departments, and through mutual audits, we are striving to improve the level of and increase awareness of disaster prevention by conducting practical drills, holding study sessions, and more.

Global casting disaster prevention audit

Semiconductor officer disaster prevention audit
