

BAMBOO+

Sustainable molding material made of domestic bamboo

 **TOKAI RIKA**

BAMBOO+

Sustainable molding material made of domestic bamboo

Japan has such a beautiful resource.

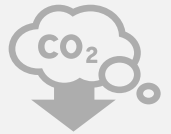

With the characteristics of moldings,
the material attracts people over time by the distinctive appearance.

Rich appearance, elegant luster, and silky texture

Environmentally Friendly

- Fast-growing and sustainable bamboo is turned into fiber through an original process and blended more than 50%.
- Manufacturing-related CO₂ emissions are reduced by 50%.※ (※Compared to ABS)

Safe and Secure

- Material reinforced by the bamboo fiber ensures automotive quality.
- Existing injection molding equipment is available.

Contribution to community

- Preservation of *satoyama*
 - Healthy bamboo forests can be kept by cutting bamboo trees-
- The bamboo material contributes to the creation of a prosperous society together with the local community.
